DETAILED ACTION

This is a response to the amendment filed 5/10/2005. The amendment has been entered. Claims 1, 4-19 and 22 are pending and are under examination. The finality of the previous Office has been withdrawn in view of new grounds of rejection as follow.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 18-19 and 22 are rejected under 35 U.S.C. 102(e) as being anticipated by Nagata (USP 6,804,096), newly cited prior art.

Figure 4 shows a driver for driving an inductive load (2) comprising steps of connecting a load via a switching transistor implemented as N channel MOS power transistor (111) with a supply voltage (Vb), controllable switching means (110, 201a, 30, 32, 34, 36, 38, 40, 42, 117) for applying a potential exceeding the voltage of the supply voltage source (output of the charge pump) to the gate electrode of the switching transistor, wherein said switching means incorporate at least first, second and third transistor switching means (transistors 58, 36, 30) said first switching means transistor (58) having collector current flows at least in part to the gate electrode of the switching during ON state and connected as a current source, the first switching means transistor is connected as a current source is part of a current mirror circuit (transistors 57, 58 constitute a current mirror circuit), said third switching means transistor (30) having an

emitter connected to the gate electrode of the switching transistor and collected connected via a leakage resistor (34) to the source electrode of the switching transistor as called for in claims 18 and 22.

Regarding claim 19, the first switching means transistor flows to the gate electrode of the switching transistor via a diode (59) connected in the flow direction.

Allowable Subject Matter

3. Claims 1 and 4-17 are presently allowed.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
